QUICK INSTRUCTION GUIDE

SGZSK | PANEL ALIGNMENT CLAMP

Quick operating instructions • Keep this sheet for reference

PURPOSE	MODEL SGZSK
Temporarily grips and aligns profiled standing seam panels or smooth sheet metal during roof and facade installation.	Quick-adjusting grip pliers with protective plastic jaws and dipped handles.

BEFORE YOU START

- Inspect jaws, plastic covers, adjustment screw and locking mechanism.
- Confirm panel profiles and finished surfaces are compatible with the grip.
- Support the panels; use roof fall protection and suitable gloves.

HOW TO USE

1. Position the standing seam panels near their intended alignment or setout line.
2. Inspect the clamp and ensure the protective plastic jaws are clean and secure.
3. Open the handles and adjust the grip opening to suit the material thickness.
4. Place the wide, parallel jaws over the profiled panels or sheet edges to align.
5. Position the plastic jaw faces to contact the metal without trapping debris.
6. Squeeze the handles to lock the clamp with sufficient, controlled pressure.
7. Check that the adjacent panels align correctly and are securely supported.
8. Reposition or readjust the clamp as required; avoid excessive gripping force.
9. Release and remove the clamp before finishing the seam or the installation.
10. Inspect panel surfaces and alignment, then clean and store the clamp.

IMPORTANT SAFETY NOTES

- Use only as a temporary positioning aid; do not leave installed.
- Plastic jaws reduce marking risk but cannot guarantee a mark-free finish.
- Keep fingers clear of the jaws; do not over-tighten or deform panels.

CARE AND STORAGE

Clean protective jaw faces; inspect wear and adjustment action; store dry.

SPECIFICATIONS

Jaw width: 80 mm; dimensions: 210 × 80 × 60 mm; weight: 0.55 kg.

Configuration: Plastic protective jaws; dipped handles; quick-grip adjustment.

Application: Temporary panel alignment on roofing and facade work.
